Using a garden trowel, spade, sampling tube, or soil auger collect a scoop of soil at a depth of 6-8 inches. Do not include any surface matter or grass in the sample. Place the collected soil in a clean bucket or pan.

Repeat this process four more times at scattered plots throughout the chosen area. A total of five scoops make up one soil sample. Place the soil sample in the provided sample bag. After filling in the information on this sheet and the sample bag, simply place this sheet and your sample in the provided postage-paid envelope and drop it in your local postal box. Results will be returned to you via Email or U.S. Postal Service within 5-7 business days.
