

FEEDSCAN WEB

FOR
FARMS

DEMYSTIFY YOUR FARM'S NUTRITION SAMPLING AND DATA COLLECTION

You may have your feed inventoried, but do you know how the quality is changing over time and fermentation? Or how harvest quality varied between fields this year? And how your purchased forages compare?

FeedScan Web, Rock River Laboratory's simple nutrition sample submission web interface is your farm-level means to easily synchronize your nutrition data to help make sound decisions for time and economic gains. All you need are login credentials and label stickers.

Harvest sampling alignment

Benchmark your nutrition - set a baseline to grow from and improve your harvest year over year. Know your grower's performance and reward them based on quality. How do they compare? Track your fields' harvest storage - right down to the pile; and monitor its nutritional value.

Manage your data, strategically

It's YOUR feed data, and now you can control it - from sampling through results. Maximize nutrients and costs by strategically allocating your forages to the ideal animal groups - based on the feed data.

Delegate sampling management

Provide your team everything needed to easily collect the necessary samples, at the right time, with the correct analysis - via labels you print.

The future

Nutrition data could be needed for conservation requirements and sustainability goals. With FeedScan Web, you're already tracking the ins and outs of your home-grown and purchased feeds.

Start using FeedScan Web today to unlock your feeds' data!
